Experience

Amazon, Sr. User Experience Researcher, *Ecomm/B2B/SAAS/AI/Buy with Prime* Jan 2022 - Present

- **Led foundational research informing annual product planning and multi-year strategy** for a global commerce platform, driving an org-wide pivot away from shipping-speed investments toward higher-impact merchant and shopper experiences.
- **Owned end-to-end research that uncovered critical onboarding failures in Buy with Prime's Shopify app**, directly driving a \$1M+ investment and launch of "fuzzy" SKU matching that reduced merchant onboarding time by 35% and increased FBA unit-weighted SKU parity by 2,500 bps.
- **Designed and built an AI-powered persona generation system** that transformed raw interview transcripts into "always-on VOC," reducing synthesis time by days and enabling product, design, and research teams to directly interrogate customer insight.
- **Led cross-org research integration for supply chain unification initiative**, aligning insights across 8+ partner product teams into shared CX frameworks and decision mechanisms.
- **Established recurring customer empathy and accountability mechanisms** (executive listening sessions, interview livestreams, friction tracking) that tied customer insight directly to leadership decision-making and product implementation.

Comcast, User Experience Researcher Jun 2019 - Jan 2022

- **Led end-to-end research across the Xfinity ecosystem** (Xfinity.com, X1, Xfinity Stream, Internet & TV services), supporting complex, multi-platform customer journeys.
- **Owned research strategy for high-impact shopper funnels** (plan selection, onboarding, troubleshooting), steering org-wide product and design decision making with user-data.

Samsung, User Experience Researcher Jun 2017 - Jun 2019

- **Owned integration of Western market voice-of-customer** across Samsung's flagship product portfolio, driving strategy for Galaxy S, Galaxy Note, foldables, AI assistants, and Smart devices.
- **Led discovery and concept validation for unreleased and experimental products**, partnering with design and engineering to evaluate early-stage prototypes and de-risk next-generation bets prior to market commitment.

Education

- Master of Applied Cognition and Neuroscience, Human Computer Interaction, *U. of Texas Dallas*
- Bachelor of Psychology / Neuroscience, *Pennsylvania State University*

Publications: "Developing Virtual Patients with VR/AR for a natural user interface in medical teaching," 2017 *IEEE 5th International Conference on Serious Games and Applications for Health (SeGAH)*, 2017

Research Scope: End-to-end UX research across the full product lifecycle: foundational discovery, concept validation, evaluative testing, post-launch learning, informing roadmap, strategy, and executive decisions.

Methods: Qualitative and quantitative research expert: devising brand new methods, generative interviews, surveys, MaxDiff, data triangulation, usability, experimentation, scrappy research, large-scale synthesis, etc.

Tools & Systems: GenAI-enabled research workflows, insight systems, and automation; Python, Figma, Qualtrics, UserTesting, data analysis, and scalable VOC frameworks, etc.

Operating Model: Independent IC and org-level partner, defines problems, executes rigorously, synthesizes at scale, and translates insight into clear product, design, and business action.
